A top-down view of a large number of green glass bottles arranged in a tight, repeating pattern. Each bottle has a glowing yellow cap, creating a grid of light points against the dark green background of the bottles. The perspective is slightly angled, showing the necks of the bottles pointing towards the bottom right.

Thesis

Report number	CERN-THESIS-?
Title	Study on the discovery of new heavy,neutral gauge bosons with the ATLAS experiment
Author(s)	Antonaki, Ariadni (Athens U.) ; Kourkoumelis, Christine (dir.) (Athens U.) ; Fassouliotis, Dimitrios (dir.) (Athens U.) ; Karanikas, Alexandros (dir.) (Athens U.)
Imprint	246 p.
Thesis note	PhD : Athens U. : 2012-05-25
Note	Presented 20 Mar 2012
Subject category	Particle Physics - Experiment
Accelerator/Facility, Experiment	CERN LHC ; ATLAS
Abstract	In this thesis, a search for a new, heavy, neutral gauge boson, namely the Z' boson with Standard Model-like couplings, is presented. The study has been performed using the LHC p-p collision data, collected with the ATLAS experiment, at a center of mass energy of $\sqrt{s} = 7\text{TeV}$, covering two different time periods: March-November 2010 and March-June 2011. The total integrated luminosity for these periods was of the order of 42 pb ⁻¹ and 1.2 fb ⁻¹ correspondingly.
