INTRODUCTION

One year on, the Czech Statistical Office has issued the publication **Information Society in Figures** again, this time titled with the year 2017. The aim of this publication is to provide readers with up-to-date basic statistical info. about the development in usage of modern information and communication technologies (ICT) in the main areas of our society.

The brochure consists of the following seven chapters:

- A. The **ICT Infrastructure** chapter contains basic data on the available telecommunication and broadband infrastructure. Data on registered Top-level domains are also available here.
- B. The **Households** chapter contains information on households' access to selected ICT. Information about number of mobile phones used by households are included here.
- C. The **Individuals** chapter includes basic information on ICT uptake by adult population. This basic information is supplemented with data on selected Internet activities. Information about use of mobile devices to access the Internet and about use of Internet storage space is also included here.
- D. The **Enterprises** chapter provides an overview on ICT use by enterprises with main focus on e-commerce activities. Data on use of social media by enterprises, about cloud computing services or Big Data analysis are also added.
- E. The **eGovernment** chapter provides information on use of the Internet in interaction with public authorities by individuals and enterprises. Data about Czech Point services, Electronic submissions for the Financial Administration (eTax) and electronic Data Boxes are also introduced.
- F. The **Education and digital skills** chapter gives an overview of ICT devices used in schools. Data on selected digital skills provide information about computer software use by individuals. Data on individuals using the Internet for educational purposes are also included in this chapter. This chapter also presents data about tertiary education students of Computing and data on ICT specialists.
- G. The **eHealth** chapter gives an overview of ICTs used by independent physicians. Data on the selected Internet activities of independent physicians and information on the usage of the Internet by individuals for seeking health-related information and making an appointment with a practitioner via a website are also included.

Presented data on ICT development and use **are further classified** for households and individuals according to their main socio-demographic characteristics, data related to enterprises according to their main economic activity (industry) or size.

In addition to data for the Czech Republic, data for other **member states of the European Union** are also presented.

Data given in this brochure were acquired, in most cases, from the **official surveys or databases** of the Czech Statistical Office. **International comparisons** were compiled by the Czech Statistical Office from using freely available data sources of the Eurostat, the European Commission, the OECD or the ITU.

For information on the production and the supply of advanced ICTs, including data on investments, trade or qualified human resources in this field see our publication **Information economy in figures**.

If you needed any further information, do not hesitate to contact us directly. Your suggestions help us improve our further releases.

A ICT Infrastructure

This chapter examines trends in the available **telecommunication and internet infrastructure** measured mainly by number of telephone and broadband subscriptions. Data used in this chapter are collected from the telecommunication or Internet service providers (supply side) and should be distinguished from data based on ICT users' surveys (demand side).

Reference period: end of the year, unless otherwise stated.

The information in this section applies to services provided at the retail level only, **from services to end users**.

Definitions:

- **Fixed telephone subscription** refers to individuals or legal entity connected to the public switched telephone network (PSTN) including usage of IP telephone (VoIP technology). Number of fixed telephone subscriptions is measured as a number of active **fixed telephone lines (PSTN lines) and VoIP fixed line subscriptions (VoIP lines)**.
- **Mobile telephone subscription** refers to individual or legal entity connected to a public mobile telephone service that provides access to the PSTN using cellular technology and offering voice communication. Number of mobile telephone subscriptions is measured as a number of **SIM cards**. Both **post-paid** and active **prepaid** SIM cards that have been used during the last three months are included. *Note: As one person may use more than one active SIM card, the number of mobile phones can exceeds the number of individuals in total.*
- **The telephone traffic** originated in fixed or mobile telephone networks is measured by means of the number of actually called minutes (real minutes of calling) during the reference year, not the invoiced ones.
- **Broadband internet subscription** includes both **fixed (wired and wireless)** and **mobile access** to the Internet with nominal speed 256 or more Kbit/s, in one or both directions. It includes both residential subscriptions and subscriptions for organizations.
- **Fixed wired broadband** includes one of these "wired" technologies: DSL (Digital Subscriber Line); Cable modem (CaTV) and Fiber (FTTx).
- **Fixed wireless access (FWA)** is the terrestrial internet connection by means of a radio system including non-licensed frequency (**Wi-Fi**). It is characteristic by placing of the end point device on a fixed location (house, apartment) - the so-called WLL (Wireless Local Loop). *It is included only if this service is used as the transport mechanism of the Internet service provider (ISP).*
- **Mobile broadband** is internet access on third generation technologies (3G) and higher (4G/LTE). Mobile broadband subscriptions refers to:
 - **Standard mobile subscription** via SIM cards are typical voice subscriptions which also provide access to the Internet but are not purchased separately. It covers only actual subscribers - users must have accessed the Internet in the last three months.
 - **Dedicated data subscription** offered separately from voice services, either as an **add-on data package** to voice service **via SIM cards** or a **stand-alone service** using USB data **cards/modems/keys** integrated usually into portable computers or tablets.
- **Domain (Internet domain/domain name)** is a unique identifier of a computer or computer network connected to the Internet. The domain is registered by the registration authority (Top Level Domain).

Statistical information from the **Czech Telecommunication Office** (<http://www.ctu.eu>) has been used as main data source for the Czech Rep.

Data for **registered domains** has been obtained from www.nic.cz.

International comparison data has been taken from **ITU and EC database**.

For further information on ICT infrastructure see:

Fibre (FTTx)	350	404	473
Subscriptions type			
Residential subscriptions (individuals)	.	.	2 487
Subscriptions for organizations (e.g. enterprises)	.	.	459

* Fixed-broadband subscriptions refers to fixed subscriptions to high-speed access to the public Internet, at downstream speeds equal to, or greater than 256 kbit/s. This includes cable modem, DSL, fibre-to-the-home/building, other fixed (wired)-broadband subscriptions, satellite broadband and terrestrial fixed wireless broadband (Wifi). Number of subscriptions is measured by number of access points using one of the above listed technologies for fixed broadband internet connection.

** Fixed wireless access (FWA) is the terrestrial internet connection by means of a radio system including non-licensed frequency (Wi-Fi). It is characteristic by placing of the end point device on a fixed location (house, apartment) - the so-called WLL (Wireless Local Loop). It is included only if this service is used as the transport mechanism of the Internet service provider (ISP).

B Households

Since 2002, the Czech Statistical Office (CZSO) has been regularly monitoring the selected ICT in Czech households by an independent annual statistical survey titled: “**Sample Survey on ICT Use in Households and by Individuals.**”

Since 2006, this survey has been carried out according to **the Regulation (EC) No. 808/2004** of the European Parliament and of the Council concerning Community statistics on the information society. The regulation allows obtaining of internationally comparable data.

Reference period: 2nd quarter of a monitored year

Sample size: 6 000 households

Data comparability with Eurostat database

Data for the Czech Republic published by Eurostat slightly differs from data published by the CZSO. This difference is due to the fact that Eurostat includes, as part of the data it publishes, solely households with at least one person aged 16 to 74. The CZSO publishes data for all households (without age restrictions).

Definitions:

- **Households with a computer** involve all households, which at the time of the survey stated, that at least one of the household members had an access to a computer at home. *The household does not need to be in possession of the computer (it may be employer's portable computer or tablet) yet this computer should be functional and located at home. A portable computer may not be permanently located at home; it may be in use also at work or at school.*
- **A computer** refers to a desktop computer, a laptop (portable) computer or a tablet. Smartphones are excluded.
- **Households with Internet access** include all households which at the time of survey stated that at least one of the household members had access to the Internet at home through any device. *'Access' does not refer here to the "connectability" (i.e. can connections be provided in the households' area), but to whether anyone in the household could use the Internet at home if desired.*

Regional data can be found in chapter 18 of each **Regional yearbook**.

<https://www.czso.cz/csu/czso/regional-yearbooks>

The **Eurostat** online database for **Information society statistics** has been used for the international comparison. Data from this database were extracted in March 2017.

Households with access to a telephone

Data on households equipped with **landlines** and **mobile phones** come from the **Household Budget Survey (HBS)**.

- **A fixed phone** refers to a telephone line connecting a customer's terminal equipment (e.g. telephone set) to the public switched telephone network (PSTN) and which has a dedicated port on a telephone exchange.
- Household with a **mobile telephone** means that the mobile telephone is generally available for use by members of the household at any time, regardless of whether it is actually used. The mobile telephone may or may not be owned by the household but should be considered a household asset.

An **international comparison** about penetration of fixed and mobile telephone in households was drawn from the EC: "**E-Communications and Digital Single Market Household Survey**".

C Individuals

Since 2002 the Czech Statistical Office (CZSO) has been regularly collecting detailed information on the users of the Internet by an independent annual statistical survey titled: “**Sample Survey on ICT Use in Households and by Individuals**”.

Since 2006 this survey has been conducted according to the annual implementing measures of the **Framework Regulation (EC) No. 808/2004** of the European Parliament and of the Council concerning Community statistics on the information society which ensures data harmonisation and comparability among EU countries.

Reference period: 2nd quarter of a monitored year

Sample size: 10 000 individuals aged 16 and over

The education category is published for the age group of 25 and over, as there are a lot of students with a low education attained using ICT very intensively in the age category 16-24.

Comparability of data published by the CZSO and Eurostat:

The data for the Czech Republic published by Eurostat slightly differs from the data published by the CZSO. This difference is due to the fact that Eurostat includes solely individuals aged between 16 and 74 years. The CZSO provides as standard data for the whole adult population aged 16+. *This is the reason why the tables in this publication give for the Czech Republic dual total values: total of aged 16 and over and total aged 16-74.*

Definitions:

- **Individuals using the Internet – Internet users** are individuals who used the Internet **at least once in the last 3 months** preceding the interview **anywhere** (at home, work, school, etc.) and for **whatever reason** (private or work).
- **The Internet use** shall mean any activity on the Internet carried out in an active manner, for instance, browsing of websites, downloading of files, using emails, from any location, for any purpose and using any devices not just computers (including laptops) but also tablets or mobile phones (smart phones).
- Part of the survey focuses on **access to the Internet via selected types of devices** (desktop computers, laptops, tablets, mobile phones, etc.). An individual used the device to access the Internet if he/she did so in the last 3 months prior to the interview – it could have been at home, in work or at any other place, for private or working purposes. It does not matter what type of connection was used to access the Internet (mobile networks, Wi-Fi, cable).
- Monitored **Internet activities** were carried out by the respondents for **private purposes at least once in the last 3 months** preceding the interview by using **any device** including a mobile phone. *Only activities related to cyber security have the reference period of 12 months. On-line purchases may have the reference period of 3 months or 12 months* preceding the interview.
- **Social networking** can be distinguished from other communication and content activities by the aspect of creating a profile on certain websites. Being a member of a network with selected other members who share interests and activities is an essential characteristic of a social network. A person is called a user of social networks if she has a profile on any social network and used the network at least once in the last 3 months before the interview.
- Looking for **information related to travel or accommodation** includes using the Internet for ascertaining information about travel destination, trips, hotels or any other type of accommodation, travel tickets, etc.
- **Watching TV via the Internet** refers to watching of programmes of the common TV broadcasters who give the possibility to watch TV live at a specific broadcast time or to watch a programme from an archive.

- **Websites intended for sharing (e.g. YouTube)** include services where people can upload a video content and also watch videos which other users have uploaded. These websites are generally free of charge. They are financed via advertisements.
- **Free video catalogs (e.g. Stream)** include web pages which are operated by one provider. Users of these web pages can watch video content on these sites for free.
- **Paid video catalogs (e.g. Netflix)** include commercial services (for payment) on demand and therefore the videos that one might have watched on the basis of some kind of subscription (also one-time).
- **Internet storage** also called as “cloud services” offers the possibility to store on a server accessible over the Internet. It is appropriate especially for large files which take up space on hard drive. Storing them on the Internet also provides with opportunities to share the files with other devices.
- **An individual purchasing on the Internet** is a person who in the last 12 months purchased or ordered a good or a service for private purpose over the Internet. This e-commerce activity may be performed on any device including smart phone. Goods or services ordered may not be paid over the Internet. Goods or services may be delivered on-line (over the Internet) or off-line (mail or in person). *Purchases via SMS, MMS or emails are excluded since they do not make use of the internet via web browsers or apps. Mere decision on the purchase on the basis of information acquired through the Internet is not considered to be an Internet purchase. Reference period for online purchases is 12 months prior the interview, only amount of money spent on online purchases and frequency of purchasing online is measured with the reference period of 3 months.*
- **Cookies** are small text files that enable the recognition of the computer. They are used to collect information about which web pages are visited on the Internet. Sometimes cookies are set and allowed to optimize the usability of the web site.
- **Limitation of access to content on social networks** can be done by restriction of access to whole account or only to selected information on the account (e.g. pictures or statuses).

Data on ICT use by individuals classified by **gender** of the respondents can be found in the publication titled: „**Focused on Men and Women**“.

<https://www.czso.cz/csu/czso/focus-on-women-and-men>

The **Eurostat** online database for **Information society statistics** has been used for the international comparison. Data from this database were extracted in March 2016. For more information see:

<http://ec.europa.eu/eurostat/web/digital-economy-and-society/data/comprehensive-database>

D Enterprises

Since 2002, the Czech Statistical Office (CZSO) has been regularly monitoring development in usage of information technologies by enterprises with 10 or more persons employed in selected industries with independent annual statistical survey.

Since 2006, the survey has been conducted according to the annual implementing measures of the **Framework Regulation (EC) No. 808/2004 of the European Parliament and of the Council** concerning Community statistics on the information society that ensures data harmonisation and comparability among EU countries.

In 2016 this survey was conducted in the first quarter, with the sample of approximately 7 500 enterprises with 10 or more employees. The resulting data has been then extrapolated to the entire population of enterprises with 10 or more employees in the Czech Republic (38 thousand enterprises).

Reference period: 31 December (for the years 2000–2004), since 2006 the reference period refers to January of the monitored year. In the case of electronic commerce and using the Internet for interaction with public authorities, the data pertains to the entire year.

Sample size: 7 500 enterprises with 10 and more persons employed

Data comparability:

- The data obtained in 2008 and later are not fully comparable with the data of previous years. This difference is due to implementation of a new NACE classification.
- The data for the Czech Republic presented by Eurostat may slightly differed until 2015 from data presented by the CZSO. This difference was due to the fact that Eurostat does not include, as part of the data it publishes, enterprises from the financial sector. Data are fully comparable since 2016.

Definitions:

- **Internal computer network** (Local Area Network; LAN) connects two or more computers to share information, files, internal emails and applications within the enterprise.
- **WLAN** - the use of wireless technologies such as radio-frequency, infrared, microwave, or other types of electromagnetic or acoustic waves, for the last internal link between users devices (such as computers, printers, etc) and a LAN backbone line(s) within the enterprise's working premises. It includes mainly Wi-fi and Bluetooth technologies
- **Intranet** - an internal company communication network using an Internet protocol allowing communications within an organisation.
- **Fiber optics technology** - kind of the most modern fixed internet, a frequent solution is a combination of optical fiber and Ethernet wiring used to connect devices to the Internet network. Optical fiber is implemented into the building, then distributed by cables. Usually provides the fastest Internet connection.
- **Domain (Top-Level Domain)** - unique identifier (name) of a computer or computer network connected to the Internet. Top-level domain describes the division of the country (national ccTLDs) or the general category of organizations or entities (generic domains).
- **B2C sales** – Sales to private customers.
- **B2B sales** – Sales to other enterprises.
- **Social media** use by enterprises – use of tools for conversing and creating content online and for connecting with customers, suppliers or other partners or within the enterprise. The following are the main social media communication platforms and tools for enterprises:
 - **Social networks** (e.g. Facebook or LinkedIn);

- **Enterprise's blog or microblogs** (e.g. Twitter);
- **Multimedia content sharing websites** (e.g. YouTube or Flickr);
- **Wiki based knowledge sharing tools** (e.g. Wikipedia-like sites).
- **Cloud computing** – refers to **ICT services** that are used **over the Internet** to access software, computing power, storage capacity etc. where the services have all following characteristics: are delivered from servers of service providers; can be easily scaled up or down (number of users or change of storage capacity); can be used on-demand by the user, at least after the initial set up; **are paid for** (either per user, by capacity used, or they are pre-paid).
- **Cloud computing on shared servers** - the enterprise uses a paid cloud computing shared servers of service providers.
- **Cloud computing on servers exclusively reserved for the enterprise** - the enterprise uses a paid cloud computing services from servers of service providers exclusively reserved for the company (for one customer) and are not shared with other clients.
- **Big Data** – are generated from activities that are carried out electronically and from M2M communications. They typically have following characteristics: significant volume (vast amounts of data generated over time); variety (different format of complex data, either structured or unstructured); velocity (high speed at which data is generated, becomes available and changes over time).
- **Contextual advertising** - a type of paid internet advertising that appears after evaluation (primarily verbal) of viewed webpages' content or keywords searched by Internet users.
- **Remote access to the enterprise's e-mail system** the possibility of using enterprise's email from outside (e.g. from home), regardless of the type of used device.
- **Electronic commerce** shall mean e-purchases or e-sales (placing or accepting electronic orders) via the Internet or other computer networks (proprietary networks used for market transactions) regardless the method of payment or delivery. Value of e-purchases (e-sales) is a percentage of the total financial value of all enterprises' purchases (enterprises' turnover). Purchases (sales) implemented on the basis of orders prepared from information obtained on the Internet but placed in a traditional way (by phone, fax, or written order) or by manual typed e-mail are not included. Electronic orders are made through websites (Web e-commerce) or initiated by using the electronic data interchange (EDI e-commerce).
 - **Web e-commerce** are purchases or sales made via an online store (web shop), via web forms on a website or extranet, or "apps" regardless of how the web is accessed (computer, laptop, mobile phone etc.)
 - **EDI e-Commerce** are orders initiated with EDI-type messages. EDI is here used as a generic term for sending or receiving business information in an agreed format suitable for automated processing (e.g. EDIFACT, XML, etc.) and without the individual message being manually typed. "EDI e-Commerce" is limited to EDI messages placing an order.
- **Electronic data interchange (EDI)** refers to the structured transmission of data or documents (messages) between organizations or enterprises by electronic means in an agreed format which allows its automatic processing (e.g. EDIFACT, XML, etc.) and without the individual message being manually typed.

The **Eurostat** online database for **Information society statistics** was used for the international comparison. *This database was updated in December 2016. For more information see:*

<http://ec.europa.eu/eurostat/web/information-society>

Further information on ICT usage by enterprises can be found at:

Source: Eurostat, 2016

The Czech Statistical Office (CZSO), in order to monitor the development of ICT usage by public authorities in the Czech Republic, used to collect data with a short module focused on **ICT usage in the public administration sector**. The latest survey on this issue was conducted in the first half of 2012 with **reference period of 31 December 2011**.

Since then the Czech Statistical Office has been focusing more on data on **e-government services** than on data on ICT equipment. Nowadays it gathers administrative data from several institutions, mainly from the Ministry of the Interior of the Czech Republic and from the General Financial Directorate of the Financial Administration.

Data about the number of issued official documents by using **Czech Point services** and the number of **Electronic submissions** for the Financial Administration are included in this publication since 2015 and for the first time also data about electronic Data Boxes are part of this chapter.

Czech Point (an acronym which stands for Czech Filing Verification Information National Terminal in Czech) is a platform for assisted access to the public administration system where every citizen can obtain all the information on the data kept on him or her by the state in its central registers (e.g. get certified extracts/copies from Land Register) or where each citizen is able to fill any application to public authorities.

Electronic submission for the Financial Administration is an application which allows e-filing of tax returns (**eTax services**) such as personal or corporate income taxes returns, value added tax return and sending other documents electronically to the public authorities.

A Data Box is an instrument for secured transmission of messages and documents between public authorities and other entities. It is not intended for storing messages or performing other operations with it. Data boxes are meant to replace the ordinary paper contacts with electronic means. Electronic documents are recognised as equal to paper documents by law. *A data box is not obligatory for citizens and private individuals who carry out business activities. Establishment of a data box is obligatory for all legal entities and public authority bodies (state administration).*

Individuals/Enterprises have used Internet, in the last 12 months/ in the last calendar year before the survey, for interaction with public authorities includes obtaining information from public authorities web sites, OR downloading official forms OR sending filled in forms.

- **Obtaining information** from web sites that includes searching to obtain any type of information from public authority web sites
- **Downloading official forms** includes downloading official forms mostly in the PDF format) from public authorities' websites for any purpose of use (e.g. for information or for requesting a service).
- **Sending filled in (submitting completed) forms (an electronic submission)** include completed forms sent via Internet (to public authorities' websites) only. An electronic submission shall mean there is a web application enabling that a form can be filled in and sent out directly on-line. What is important is that citizen/enterprise does not need to visit the authority personally. Forms downloaded, printed, filled in and sent by post or email should not be included in this category.

Information on the Internet use for interaction of individuals and enterprises with public authorities comes from two annual surveys of the CZSO on ICT use by individuals and by enterprises (for additional information see Chapters C and D of this publication).

The **Eurostat** online database for **Information society statistics** was used for the international comparison. *Data from this database were extracted in April 2017. For more information see:*

<http://ec.europa.eu/eurostat/web/information-society> and <http://ec.europa.eu/eurostat/web/information-society/methodology>

F Education and digital skills

Numbers of desktop computers, tablets and laptops both with and without Internet connection calculated per 100 students in different levels of schools have been collected by **Ministry of Education, Youth and Sports**. Numbers of schools equipped with school wireless network and school intranet come from the same source. These indicators have been collected from nursery, basic, secondary and higher professional schools every year since 2005 (nursery school since 2014).

Reference period: 30/9 of the reference year

PISA 2015, survey conducted by OECD, have been used for international comparison. Questionnaires targeted on schools and questionnaires targeted on students have been used. Data presented in this chapter come from questionnaire targeted on 15-year-old students and present information on their usage of the Internet at schools.

Further information on PISA survey: <http://www.oecd.org/pisa/>

Sample Survey on ICT Use in Households and by Individuals has been used as a source for data on **computer skills** of individuals (this survey is described in details in the opening text of chapter C). Eurostat database has been used for international comparison. Data contained in this chapter present mainly information about usage of different kinds of software.

Sample Survey on ICT Use in Households and by Individuals has been also used as a source for data on different activities carried out by students. Eurostat database has been used for international comparison. *Data from this database were extracted in March 2017.*

Comparability of data published by the CZSO and Eurostat: The data for the Czech Republic published by Eurostat slightly differs from the data published by the CZSO. This difference is due to the fact that Eurostat includes solely individuals aged between 16 and 74 years. The CZSO provides as standard data for the whole adult population aged 16 and over. *This is the reason why the tables in this publication give for the Czech Republic dual total values: total of aged 16 and over and total aged 16-74.*

Reference period (data for all individuals and students): last 3 months before the time of answering the questions (unless otherwise stated)

ICT field of education (Computing: ISCED 48) is according to the international classification ISCED 97 divided into two detailed fields: **Computer science** (ISCED 481) and **Use of computers** (ISCED 482). In the Czech Republic tertiary education includes **Higher professional education and University education** which is provided by Universities at Bachelor's or equivalent level (ISCED 6), Master's or equivalent level (ISCED 7) and Doctoral or equivalent level (ISCED 8).

Data on ICT field of education come from the **Ministry of education, youth and sports in the Czech Republic** data sources.

ICT professionals (ISCO 25) refer to comprising analysts and software and computer applications developers and specialists in the field of databases and computer networks. ICT professionals are part of ICT specialists which include also ICT technicians (ISCO 35). Data on the **numbers and structure** of ICT professionals come from the **Labour Force Sample Survey (LFS)** of the Czech Statistical Office.

The Czech Statistical Office (CZSO) has been collecting data **on the adoption and use of information technologies in health care** since 2003. The main source for measuring the development of eHealth in the Czech Republic is a short module related to **ICT usage in the health-care facilities** conducted by the CZSO in cooperation with the Institute of Health Information and Statistics of the Czech Republic (IHIS). This module has been conducted annually as a part of a mandatory yearly statement on employers, employees and other contracted workers.

Notes:

Reference period: End of the monitored year for ICT equipment of health establishments and entire reference year for internet activities undertaken by independent physicians.

Target facilities: Practices of independent physicians who answered the electronic questionnaire.

Available breakdowns: Data on the use of information and communication technologies by independent physicians are available by the type of practice.

Definitions:

- **Special doctor's practices** – include offices such as dermatologists, urologists, ophthalmologists etc.
- **On-line consultation** offers the possibility to ask health-related questions, which the health establishment answers by e-mail or may publish the response on its website.
- **Online appointment system** offers the possibility to make appointments through the health establishment's website, using online form (**e-mail is not included**).
- **The Internet user** – any person who used the Internet at least once **in the last three months** preceding the interview **anywhere** (at home, at work, at school etc.) and **for whatever reason** (e.g. browsing of websites, downloading of files, using emails, private or work reasons) **and using any devices** (desktop computers, laptops, tablets or smartphones).
- **Using the Internet for looking for health related information** - seeking information about diseases, treatment, diagnosis, prevention, healthy nutrition etc. on the Internet (at least once in the last 3 months and for personal use only).
- **Storing of medical patient data on a computer or via the Internet** - electronic medical documentation stored in a computer of physician or via the Internet which enables healthcare providers and professionals to exchange medical patient data.

Detailed regional breakdown data on ICT in health establishments can be found in chapter 18 of each **Regional yearbook**.

<https://www.czso.cz/csu/czso/regional-yearbooks>

Data for international comparison of general practitioners comes from The **European Commission** online database. For more information see:

<http://ec.europa.eu/digital-agenda/en/scoreboard>

Information about **individuals** using Internet in relation to health is available from the annual statistical survey conducted by the CZSO titled: **“Sample Survey on ICT Use in Households and by Individuals”**. For more information see **Chapter C** of this publication.

The **Eurostat** online database for **Information society statistics** has been used for the international comparison. *Data from this database were extracted in March 2017.* For more information see:

<http://ec.europa.eu/eurostat/web/information-society> and <http://ec.europa.eu/eurostat/web/information-society/methodology>

Further information on eHealth statistics can be found at:

<https://www.czso.cz/csu/czso/information-technologies-in-the-czech-health-sector>
