ARCLib – LTP solution for libraries

Mgr. Eliška Pavlásková, Ph.D.

PhDr. Zdeněk Vašek, Ph.D.

Library of Czech Academy of Sciences

11th Conference on Grey Literature and Repositories

Prague, October 24, 2018

Basic information

- Research project funded by Ministry of Culture of the Czech Republic (NAKI program)

- 2016-2020

- 23 mil. CZK

- Collaboration of Library of Czech Academy of Sciences, National Library of Czech Republic, Moravian Library, and Masaryk University

- **Development of open source long-term digital preservation solution ARCLib**

www.arclib.cz

Objectives of the Project

- **Open source** solution ARCLib for long term preservation of digital data

- The methodology for **logical** preservation of digital data

- The methodology for **bit-level** preservation and proposal of a storage solution

- Test of the solution in **pilot**

Expected Properties of the Solution

- **Interoperability** with National Library of Czech Republic

  - Use of NL CR standards

- Open solution with possibility of further development

  - **Additional types of data** – Producer SIP profile

  - **System development** – customization for different fields – e.g. archiving

- **Open source** alternative to commercial software

- Focused on **national**, **special and regional libraries**

  - Supported by methodologies for system implementation and management

The methodology for logical preservation of digital data

- General/theoretical part

    - LTP in general, core standards, strategies and best practices

- Application of theoretical knowledge in ARCLib implementation

    - Implementation of long term preservation requirements into design of concrete SW solutions.

    - Description of the system with regard to implementation.

- Implementation part

    - Recommendation for ARCLib users with emphasis on specific data types.

- Certified 2017 – will be updated periodically

# The methodology for bit-stream preservation

- General/theoretical part
  - Long term preservation strategies
  - Legislative requirements on storage of digital archival materials
  - Best practices and certification requirements

- Application of theoretic knowledge in ARCLib

- September 2018 – submitted to certification

Description of ARCLib

- Implementation of OAIS (ČSN ISO 14721)

- Do not replicate a function of ProArc or Archivematica (these tools are used for SIP creation).

- Development is focused on core modules:

  - ARCLib Ingest

  - ARCLib Data management

  - ARCLib Archival storage

  - ARCLib Administration

  - ARCLib Access

Scheme
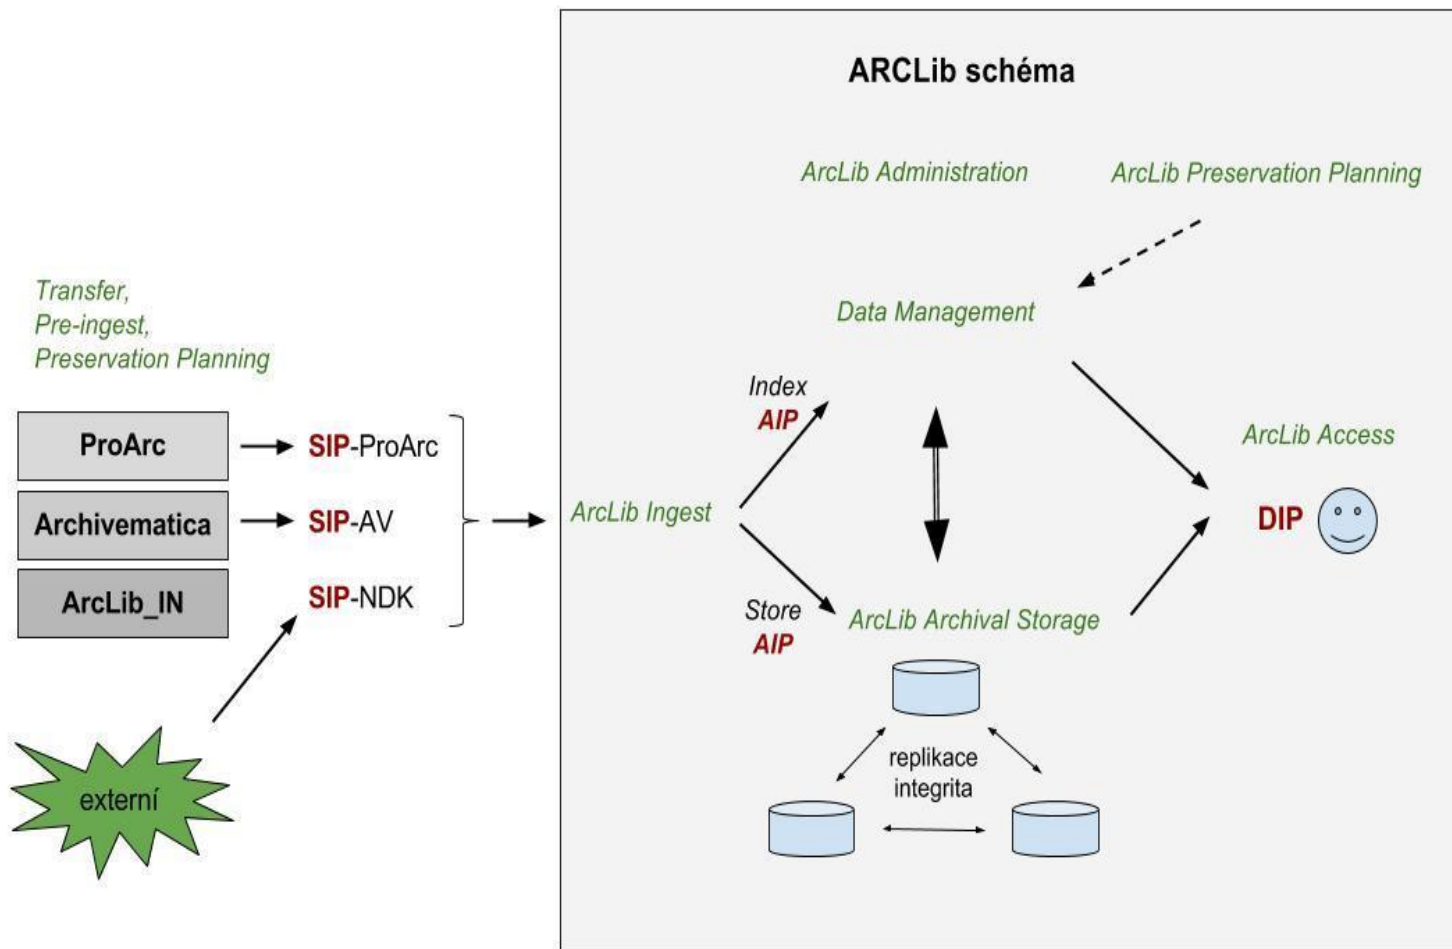

ARCLib Ingest

- Requires input of full SIP

- System is able to process :

    - ProArc NDK monographs

    - ProArc NDK periodicals

    - ProArc native monographs and periodicals

    - ProArc audio documents

    - NDK monographs and periodicals

    - Archivematica DSpace

    - Archivematica General

    - NDK electronics documents

- Functions

    - SIP validation

    - Metadata extraction from SIP

    - Metadata creation

    - Processing according producer profile requirements

- ARCLib AIP XML

    - Metadata profile based on METS, PREMIS

ARCLib Data management

- Management of AIP

- Search and indexation (also as an API)

  - Descriptive metadata

  - Technical metadata

  - Administrative metadata

- Display of AIP content

- Metadata editing

- Reporting

AIP search

Sort

| Producer ID | ⌄ | | ⇅ |

Configuration file

```
{
    "rootDirPath": "/opt/archival-storage/data"
}
```

Poznámka

☐ Write only

☑ Reachable

Storno Save and close

ARCLib Administration

- Ingest workflow configuration

  - Relevant registers – validation profiles register, script register...)

- Management of third-party tools

- User management and authentication

ARCLib Access and Preservation Planning

- **Dark archive –** not intended for end users

- Limited access options – only export functions, **DIP equals AIP**

- Format registry – connected to **PRONOM**

- Other functions of preservation planning are out of the scope of the system (supervision by **National Library CR**)

Current state of the project (October 2018)

- **The methodology for logical preservation of digital data** (certified and published) - http://hdl.handle.net/11104/0282107

- **The methodology for bit-stream preservation –** submitted to certification

- **Test version of ARCLib** running in Library of Czech Academy of Sciences

- **2020** – assumption of existence of the whole ARCLib solution and pilot in Library of Czech Academy of Sciences

Thank you for attention!
