Open Access - Seeking balance

Summary of Day One

- Eva Hnátková, Eurodoc President
- KRECon 2019
- NTK in Prague
- 7-8 November 2019

eurodoc

The European Council of Doctoral
Candidates and Junior Researchers

Eurodoc = early-career researchers

[O'Neill & Krūmiņa \(2018\)](#)

eurodoc

The European Council of Doctoral
Candidates and Junior Researchers

- non-profit organisation
- based in Brussels (2002)
- 28 national associations
- funded by member fees
- supported by volunteers
- develop & inform policy
- run workgroups & events

eva.hnatkova@eurodoc.net

Czech Landscape

- National Strategy 2017-2020 → requires OA
- Action Plan for implementation (Apr 2019)
- Open/FAIR data policy
- Reviewing Research Assessment
(external influence → governments, funders, competitive environment)
- Transfer the current publishing system
subscription-based → to gold open access

Train, support, & reward Open Science

Impact Outlook

- 'Open Science will be the new way of conducting research by opening up access to research data and results via new digital technologies and collaborative tools'
- 'A main question for us is to what extent will early-career researchers need to be trained for these practices and what is the role of early career researchers in the shift to Open Science?'

Open science for early-career researchers

Garath O'Neill, President, and Eva Hnátková, General Board Member/Coordinator WG Doctoral Candidates and Junior Researchers (PDR)

Over past generations, in order to remain Europe's position as a global research hub, it is essential to support and better open access to science and research.

GD: The implementation of Open Science is fundamental to the New Vision for Europe proposed by the European Commission (EC). Open Science will be the new way of conducting research by opening up access to research data and results via new digital technologies and collaborative tools. Open Science is actually just one policy initiative of a broader strategy to fundamentally open up research and innovation in Europe. Open Science will bring new actors into the innovation process, creating new products, methods and entrepreneurship. Open Science will develop innovative international cooperation and science diplomacy as well as address cross-national issues. These initiatives together will indeed position Europe as a global and innovative research hub. Opening up access to research is important for all researchers who rely on the research data and results from other researchers to continue new developments and discoveries and build upon previous research. This is especially true for students, institutions to finance advanced research, which may not be able to afford the often high costs for access to research through commercial publishers.

What are the goals of Europe, in relation to Open Science and the role it plays? With its European Working Group on Open Science and the role it plays? With its European Working Group on Open Science and the role it plays?
