Google Is Adding Major Libraries to Its Databases

By JOHN MARKOFF and EDWARD WYATT DEC. 14, 2004

Google, the operator of the world's most popular Internet search service, plans to announce an agreement today with some of the nation's leading research libraries and Oxford University to begin converting their holdings into digital files that would be freely searchable over the Web.

It may be only a step on a long road toward the long-predicted global virtual library. But the collaboration of Google and research institutions that also include Harvard, the University of Michigan, Stanford and the New York Public Library is a major stride in an ambitious Internet effort by various parties. The goal is to expand the Web beyond its current valuable, if eclectic, body of material and create a digital card catalog and searchable library for the world's books, scholarly papers and special collections.

An Elephant Backs Up Google's Library

BY MIGUEL HELFT OCTOBER 13, 2008 6:17 PM

Google often says that it likes to take the long-term view of things. But Google's idea of long term does not appear to be long enough for some librarians, who tend to equate long term with forever, at least when it comes to preserving books.

On Monday, a group of major libraries that are participating in Google's Library Project, said they are working together to create what amounts to a publicly accessible backup of the digital library that Google is creating. The project, [which is called HathiTrust](#), includes libraries at 12 Midwestern universities like the University of Michigan, the University of Iowa and the University of Illinois, plus the 11 libraries of the University of California system. (Hathi is Hindi for "elephant," an animal that is said to live for a long time.)

In the [Google Books Library Project](#), the scanning the collections of several large libraries gives users access to the complete text of books in the public domain, and to snippets of books with current copyrights. Google also gives each library a copy of the digitized from that library.

HATHI
TRUST

HathiTrust launches with 12 founding members from the Committee on Institutional Cooperation and the 11 libraries of the University of California.

Mission and Vision

Mission

The mission of HathiTrust is to contribute to research, scholarship, and the common good by collaboratively collecting, organizing, preserving, communicating, and sharing the record of human knowledge.

Vision

HathiTrust will be a vital catalyst for emerging forms of research, teaching, and learning that engage the scholarly and cultural record.

Membership

Eligibility

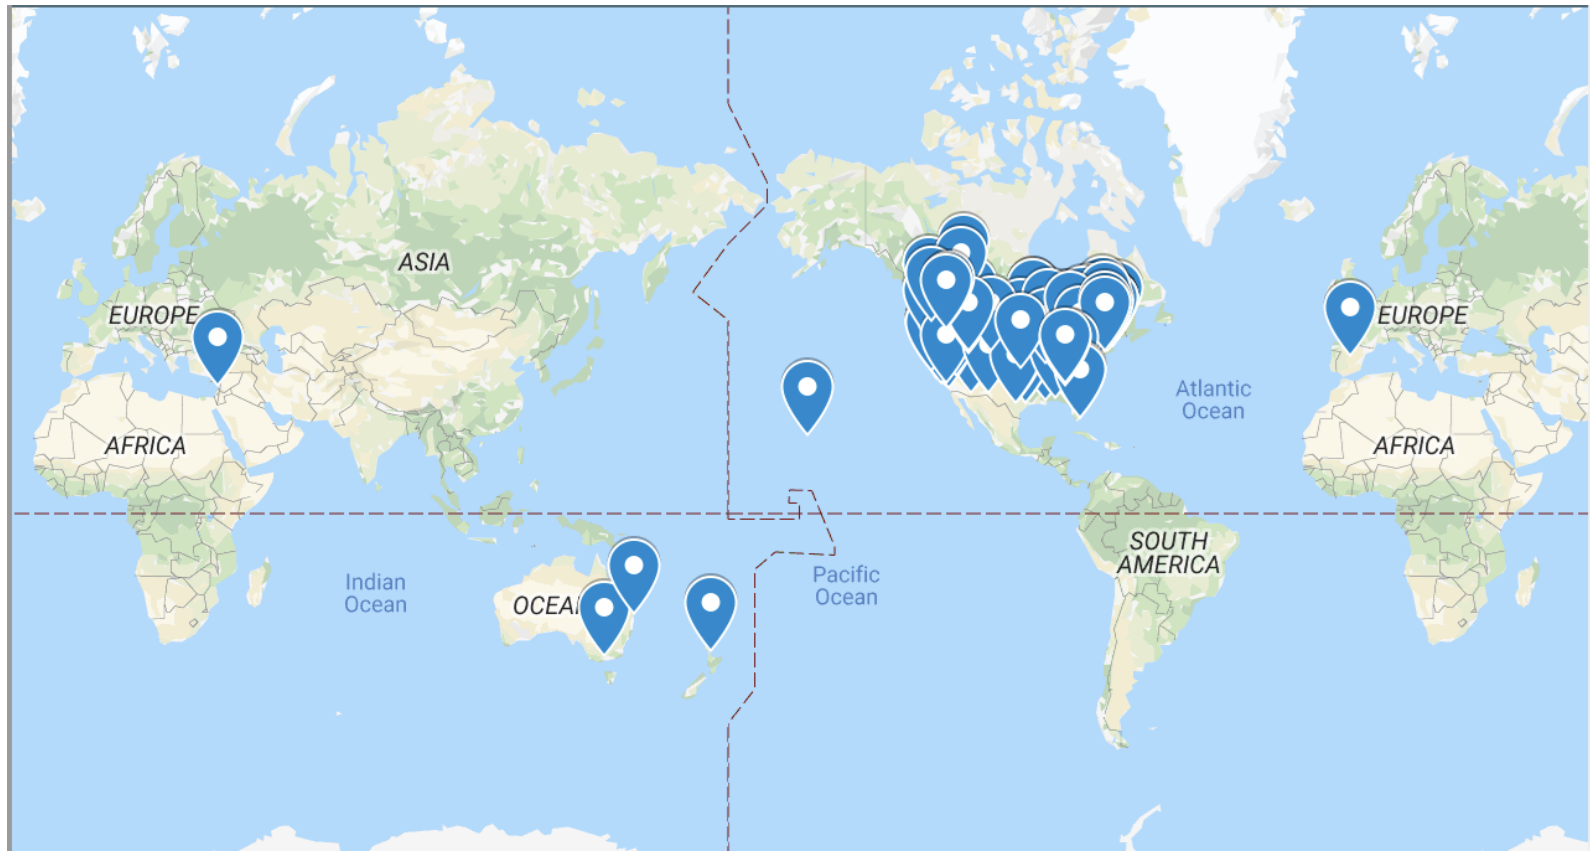

Academic and research institutions worldwide.

Requirements

- Required
 - Submission of holdings data on physical collections.
 - Implementation of SAML-based authentication system for access services.
 - Annual fees.
- Not required, but encouraged
 - Deposit of collections
 - Participations in working groups, governance

Membership Across the Globe

#exstrange: CURATORIAL AND ARTISTIC INTERVENTIONS ON EBAY

MARIALAURA
GHIDINI &
REBEKAH
MODRAK

Marialaura Ghidini and Rebekah Modrak are the lead curators of *exstrange*. This essay introduces the project, its structure and curatorial parameters, and its use of the online marketplace as exhibition platform.

This text was written for the *Journal of Curatorial Studies* and was published in Volume 6, Number 1, April 2017. It has been slightly edited here to introduce a wider example of artworks produced during *exstrange*.

#exstrange was an online curatorial project generating a collection of artworks conceived by contemporary artists and designers to be encountered, auction-style, by the users of one of the largest marketplaces on the web, eBay. The artists creating artworks on *exstrange* used the eBay interface and listing template as the tool of production for their work. As such, the chosen sale category—from Business & Industry and Consumer Electronics to Tickets & Experiences, for example—as well as title, descriptive text, accompanying images and pricing, all constituted the work. The interface of the e-commerce site became the space in which the artworks resided and were interpreted in consonance with the specificities determined by their design, notably the time-limited, one-to-one user engagement and sociological interactions pertaining to online commerce. Thus, *exstrange* entailed an auctioneer's role as an ongoing configuration among the one billion items for sale across the various national eBay platforms.

Launched on 15 January 2017, *exstrange* presented an artwork-to-auction a day until 8 April 2017. Connected by the tag *exstrange* in the listing title, the works could be found in that vast archive of commodities online that is eBay. We began the project by inviting 21 artists whose practices resonated with the project. Some of them were concerned with issues related to digital

production and creative labor (such as Silvio Lorusso, Geraldine Aslett, Tyler Demme, and Maria Mousa and Noire Neumann), some with the commodification of objects and social dynamics (such as Fundfellow, KODIST and Lloyd Corporation), while others with processes of technological historicisation and consumer culture (such as Adinshah Huma, Anshara Hande and Tara Kulkarni). We also asked 17 curators living in different parts of the world to each invite three artists according to their own interpretation of our curatorial invitation (such as). The guest curators wrote a statement accompanying their interventions and, in some instances, created their own tags to identify them; for instance Hana O' Murcha adopted *exstrange* while Gela Todorova used *everybody*. Our intention was to open up the project to perspectives with diverse critical frameworks but also heterogeneous social and geographical contexts—setting up a premise that, along with the project's open call to participation ("Artist-Joiners"), would go beyond our curatorial control.

Rather than initiating a new web platform, we sought to work with the properties and functionalities of an already existing online service, one governed by the logic and language of commerce. eBay was founded in 1995 by the Russian-American programmer Pierre Michel Omidyar. Its listing and transactional model of person-to-person commerce changed the way it proposed

Collaborative Programs

Collaborative Programs - User Support

In order to efficiently and effectively serve the needs of users, and ensure the highest level of function of HathiTrust services, HathiTrust has charged a multi-institution user support team.

Collaborative Programs - Copyright Review Program

The Copyright Review Management System (CRMS) has enabled large-scale, distributed investigations into the copyright status of works in the HathiTrust collection.

Collaborative Programs - U.S. Federal Documents Program

Mission:

Through coordinated and collective action, expand and enhance digital access to U.S. federal publications including those issued by GPO and other federal agencies.

As of July 1, 2019

- 542,731 bibliographic records
- 1,353,343 digital objects
- 509,600 monographs
- 32,619 serial titles

Collaborative Programs - Shared Print

Goal

The primary goals of the HathiTrust Shared Print Program are to ensure preservation of print and digital collections by linking the two, to reduce overall costs of collection management for HathiTrust members, and to catalyze national/continental collective management of collections.

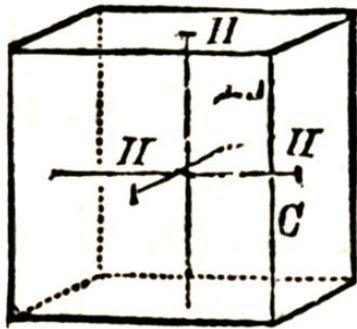

As of May 2019:

- 79 retention libraries participating in HathiTrust Shared Print Program
- 17,889,303 single-part monographs
- 5,476,598 individual titles

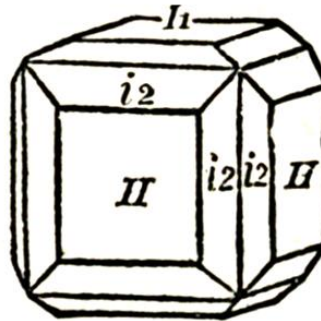

Collaborative Programs - HathiTrust Research Center

Featured Services

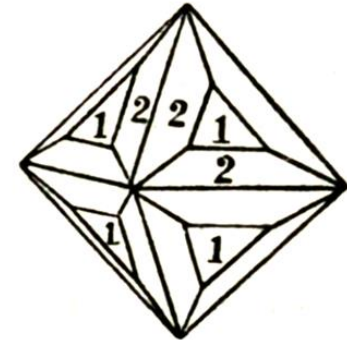

Extracted Features

An unrestricted dataset of metadata and word counts for each page in the HathiTrust Digital Library. Download and explore on your own machine.

Text Analysis Algorithms

Web-based, click-and-run tools that perform computational text analysis on worksets, which are user-created collections of volumes. No programming required.

Data Capsules

Secure virtual environments for non-consumptive text analysis, where researchers can implement their own data analysis and visualization tools.

Collaborative Programs - Projects and Grants

Global Registry of Digitized Texts Project

Project to develop an international registry of digitized texts enabling discovery and use.

Federated Module for Accessible Material for Education (FRAME)/Accessibility Grant

Project looking at facilitating access to education materials for students with print disabilities

Access and Use ***or Beyond the Paywall***

Viewing and Downloading

Anyone Anywhere Can:

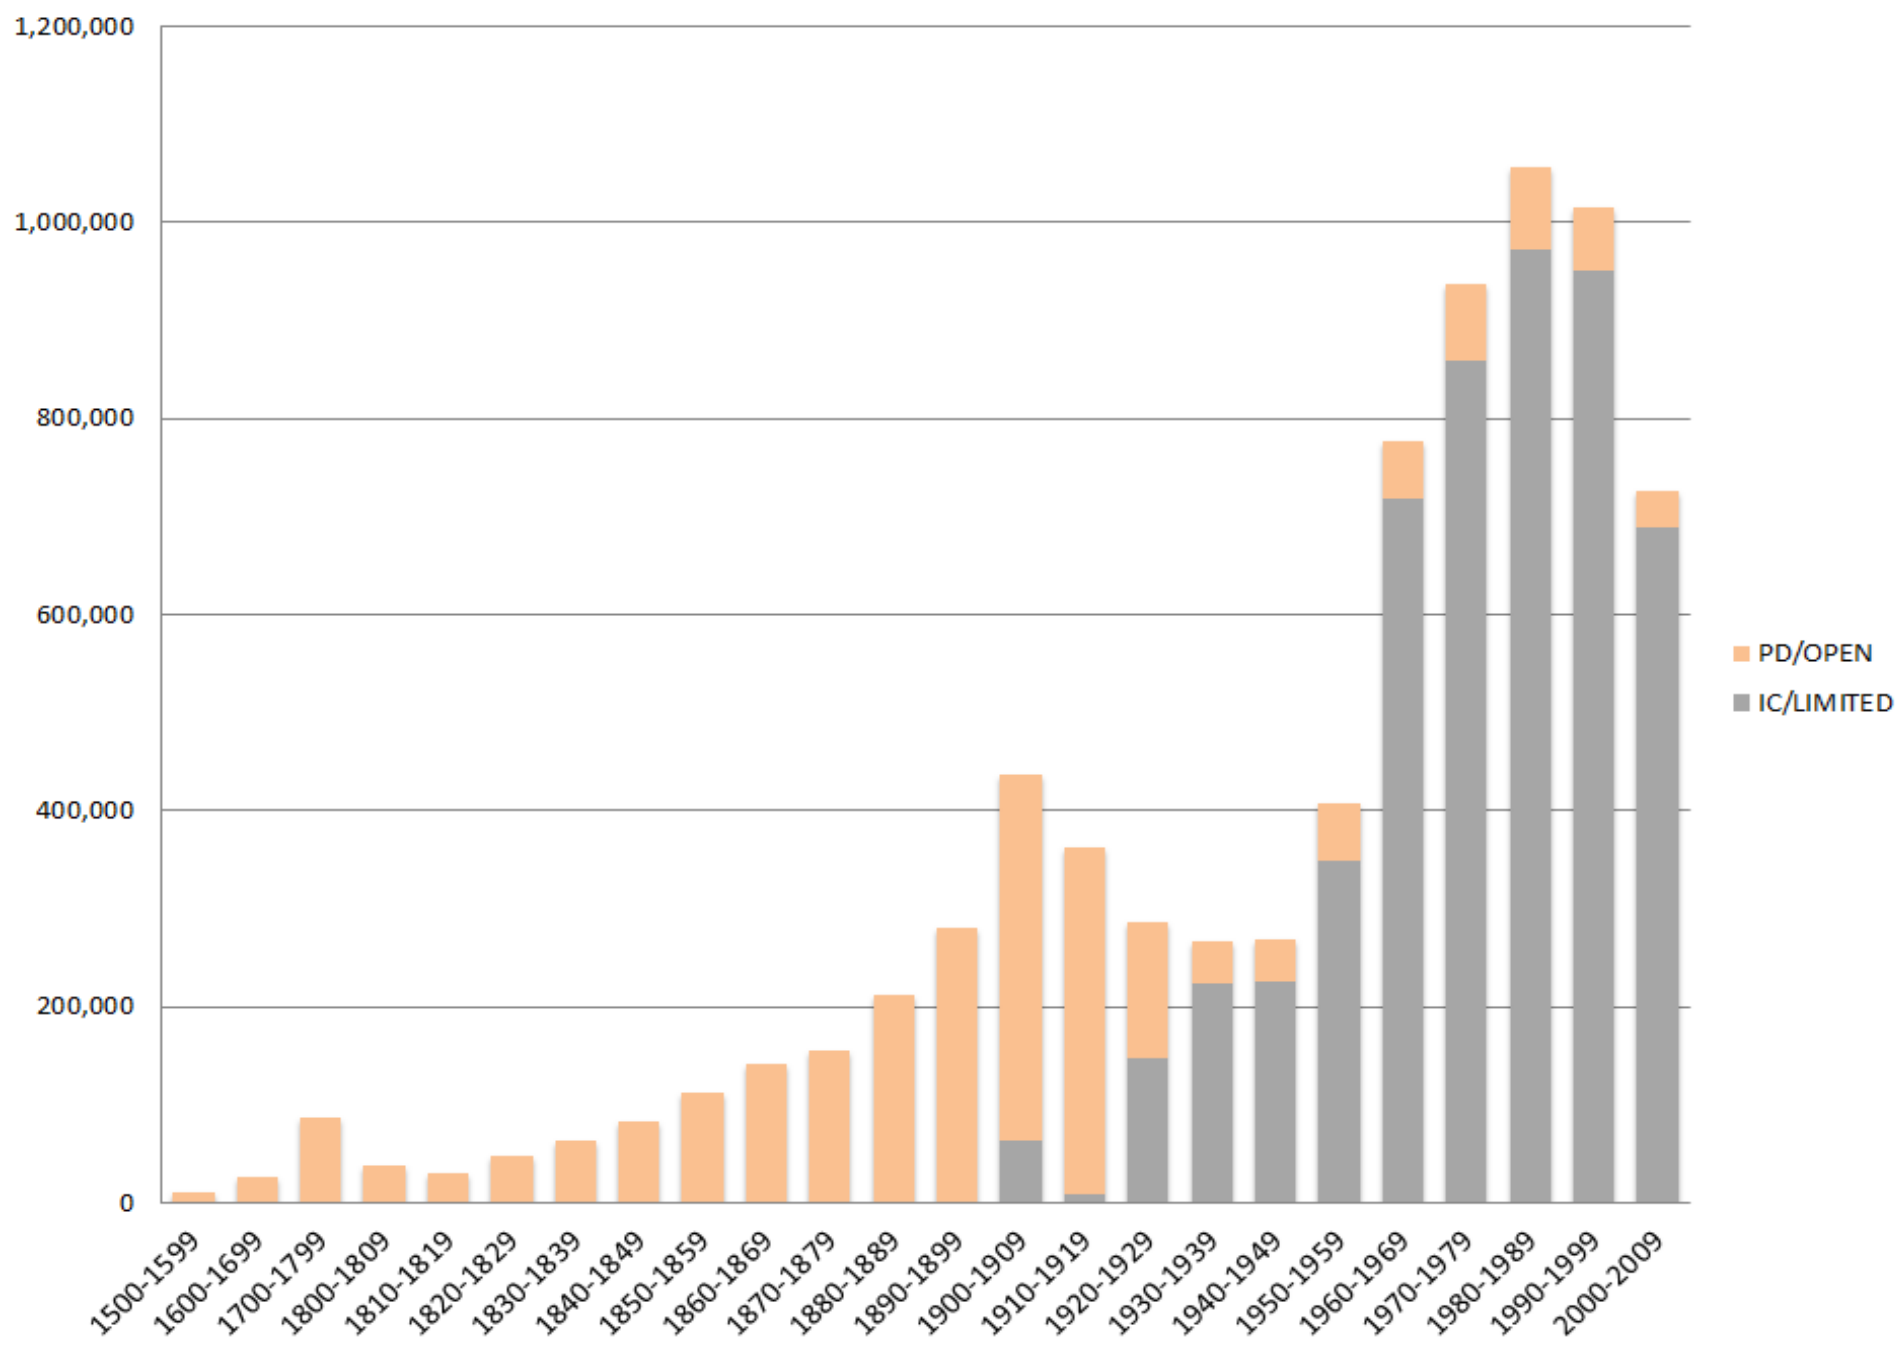

- Read public domain and open access works (via web)
- Search across the full text of the entire collection (via web)
- Receive a dataset of public domain content (under certain conditions)
- Mine text and data (via HTRC)

Members Can:

- Download public domain and open access works
- Provide access to their users who are blind or with print disabilities
- Get access to replacement copies for lost and damaged print copies (under certain conditions)
- Mine text of copyrighted content (in pilot mode via HTRC)

Distribution by Pub Date/Rights Status in HathiTrust, March 2017

Providing Access to All Users

- Accessibility
 - HathiTrust Accessible Text Request Service
 - National Federation of the Blind (NFB) User Access to HathiTrust Copyrighted Collection
 - Marrakesh Treaty

International Access and Use

- Membership for International Libraries
- International Access
- Full PDF Downloads

Future Things

- Data Analysis and Collection Management Support
- Investigate Discovery to Delivery for Print Materials
- Policy on Metadata Sharing and Use
- Expanding Lawful Access to Works

Mission and Vision

Mission

The mission of HathiTrust is to contribute to research, scholarship, and the common good by collaboratively collecting, organizing, preserving, communicating, and sharing the record of human knowledge.

Vision

HathiTrust will be a vital catalyst for emerging forms of research, teaching, and learning that engage the scholarly and cultural record.

Questions & Thank You!
